• Question No. 3

The present bull run, primarily driven by the new retail investors, _____ in an overbought, richly valued zone.

Options :

1. have been
2. has
3. is
4. were
5. None of these

Answer : is

Direction:

Read each sentence to find out whether there is any grammatical error in it. The error, if any, will be in one part of the sentence. Mark the part with the error as your answer. If there is no error, mark 'No error' as your answer (Ignore the errors of punctuation, if any).

• Question No. 4

The amount of data stored (A)/were so vast that (B)/even if we put a number on it, (C)/it would be beyond our comprehension (D).

Options :

1. The amount of data stored
2. were so vast that
3. even if we put a number on it
4. it would be beyond our comprehension
5. No error

Answer : were so vast that

Direction:

Read each sentence to find out whether there is any grammatical error in it. The error, if any, will be in one part of the sentence. Mark the part with the error as your answer. If there is no error, mark 'No error' as your answer (Ignore the errors of punctuation, if any).

• Question No. 5

The army men or the commander-in-chief (A)/were not ready (B)/to accept defeat so easily, (C)/so they fought fiercely (D).

Options :

1. The army men or the commander-in-chief
2. were not ready
3. to accept defeat so easily
4. so they fought fiercely
5. No error

Answer : were not ready

Direction:

Read each sentence to find out whether there is any grammatical error in it. The error, if any, will be in one part of the sentence. Mark the part with the error as your answer. If there is no error, mark 'No error' as your answer (Ignore the errors of punctuation, if any).

• Question No. 6

The most successful actor and comedian (A)/were late for the function yesterday (B)/because his car (C)/was stuck in the traffic (D).

Options :

1. The most successful actor and comedian
2. were late for the function yesterday
3. because his car

- 4. was stuck in the traffic
- 5. No error

Answer : were late for the function yesterday

Direction:

In each of the questions given below, four words are given in bold. These four words may or may not be in their correct position. The sentence is then followed by options with the correct combination of words that should replace each other in order to make the sentence grammatically and contextually correct. Find the correct combination of words that replace each other. If the sentence is correct as it is, select 'E' as your option.

• Question No. 7

A British-era bungalow on a hillock that **converted (A)** to be the 17th century military office of the Ahom rulers has been **used (B)** into a **depicting (C)** centre **heritage (D)** life along the Brahmaputra River.

Options :

- 1. Only A-C
- 2. Only B-D
- 3. A-B and C-D
- 4. A-D and B-C
- 5. No exchange required

Answer : A-B and C-D

Direction:

Which of the following is the second sentence of the passage?

Options :

1. c
2. e
3. d
4. a
5. b

Answer : e

Direction:

Read the passage and answer the questions that follow.

Scientists have discovered a tiny new species of chameleon in a patch of rainforest in northern Madagascar. This so-called nano-chameleon is **quite** the size of a sunflower seed, and may be the smallest reptile on Earth. Officially known as *Brookesia nana*, or *B. nana*, the new species is so tiny it's thought to survive on a diet of mites and springtails, which it hunts down in leaf litter. The creatures hunt by day on the rainforest floor and retreat to the safety of grass blades at night. If a larger predator comes calling in the dark, the wobble of the grass stalk alerts the chameleon of danger, at which point it just drops off into the underbrush.

So far, scientists have observed just two individuals: One male and one female, each of which was captured on an expedition to the Sorata massif mountains. The fact that only two individuals have been found makes it difficult to generalize upon the findings. It's possible that other chameleons in this species would be larger, or smaller, just like humans can be different heights. Indeed, scientists already know that chameleons in this family tend to have larger females and smaller males, which is called sexual dimorphism. The tiny chameleon's future is murky. The mountain forest where the lizards are found is already severely degraded. Poverty and growing populations have led to clearing of rainforests to make room for agriculture and livestock; deforestation affects around 94 percent of Madagascar's previously forested lands. The good news is that the Sorata massif has recently been included in a new protected area in Madagascar.

- Question No. 15

How does the tiny chameleon species understand that a large predator is coming to get them in the dark?

Options :

1. They will be looking for signals from the night owls and other birds, who sit at the top and spot large predators.
2. They can sense vibrations on the ground, when a large predator is approaching.
3. They emit ultrasound continuously, which will reflect, if a large predator is approaching.
4. It is difficult to sense the attack of a large predator, and they usually start running at the sight of them.
5. They will be alerted by the swaying of the tall grass stalks and they go into hiding, when a large predator comes to attack in the dark.

Answer : They will be alerted by the swaying of the tall grass stalks and they go into hiding, when a large predator comes to attack in the dark.

Scientists have discovered a tiny new species of chameleon in a patch of rainforest in northern Madagascar. This so-called nano-chameleon is **quite** the size of a sunflower seed, and may be the smallest reptile on Earth. Officially known as *Brookesia nana*, or *B. nana*, the new species is so tiny it's thought to survive on a diet of mites and springtails, which it hunts down in leaf litter. The creatures hunt by day on the rainforest floor and retreat to the safety of grass blades at night. If a larger predator comes calling in the dark, the wobble of the grass stalk alerts the chameleon of danger, at which point it just drops off into the underbrush.

So far, scientists have observed just two individuals: One male and one female, each of which was captured on an expedition to the Sorata massif mountains. The fact that only two individuals have been found makes it difficult to generalize upon the findings. It's possible that other chameleons in this species would be larger, or smaller, just like humans can be different heights. Indeed, scientists already know that chameleons in this family tend to have larger females and smaller males, which is called sexual dimorphism. The tiny chameleon's future is murky. The mountain forest where the lizards are found is already severely degraded. Poverty and growing populations have led to clearing of rainforests to make room for agriculture and livestock; deforestation affects around 94 percent of Madagascar's previously forested lands. The good news is that the Sorata massif has recently been included in a new protected area in Madagascar.

- Question No. 16

Why is it difficult to generalise the findings about the new found species?

Options :

1. Because, only two individuals of the species have been found till date and generalisation is difficult when the data is too small.
2. Because the new species exhibits different behaviour at different time and it is difficult to analyse anything from this behavioural change.
3. Because a large number of individuals belonging to this species have been found and the scientists are working on deducing an analysis about the species.
4. Because they are too tiny to make any generalisations.
5. Because they are exhibiting different behaviours at different places.

Answer : Because, only two individuals of the species have been found till date and generalisation is difficult when the data is too small.

Direction:

Scientists have discovered a tiny new species of chameleon in a patch of rainforest in northern Madagascar. This so-called nano-chameleon is **quite** the size of a sunflower seed, and may be the smallest reptile on Earth. Officially known as

Brookesia nana, or B. nana, the new species is so tiny it's thought to survive on a diet of mites and springtails, which it hunts down in leaf litter. The creatures hunt by day on the rainforest floor and retreat to the safety of grass blades at night. If a larger predator comes calling in the dark, the wobble of the grass stalk alerts the chameleon of danger, at which point it just drops off into the underbrush.

So far, scientists have observed just two individuals: One male and one female, each of which was captured on an expedition to the Sorata massif mountains. The fact that only two individuals have been found makes it difficult to generalize upon the findings. It's possible that other chameleons in this species would be larger, or smaller, just like humans can be different heights. Indeed, scientists already know that chameleons in this family tend to have larger females and smaller males, which is called sexual dimorphism. The tiny chameleon's future is murky. The mountain forest where the lizards are found is already severely degraded. Poverty and growing populations have led to clearing of rainforests to make room for agriculture and livestock; deforestation affects around 94 percent of Madagascar's previously forested lands. The good news is that the Sorata massif has recently been included in a new protected area in Madagascar.

• Question No. 17

Which of the following is true about the tiny new species of chameleon?

- (i) They are of the size of a sunflower.
- (ii) They have a vegetarian diet, consisting of dead leaves or leaf litters.
- (iii) They were found in a patch of rainforest in northern Madagascar.
- (iv) When they sense danger, they just hide in the underbrush.

Options :

- 1. Only i
- 2. Both ii and iii
- 3. Both iii and iv
- 4. ii, iii and iv
- 5. All are correct.

Answer : Both iii and iv

Direction:

Read the passage and answer the questions that follow.

Scientists have discovered a tiny new species of chameleon in a patch of rainforest in northern Madagascar. This so-called nano-chameleon is **quite** the size of a sunflower seed, and may be the smallest reptile on Earth. Officially known as Brookesia nana, or B. nana, the new species is so tiny it's thought to survive on a diet of mites and springtails, which it hunts down in leaf litter. The creatures hunt by day on the rainforest floor and retreat to the safety of grass blades at night. If a larger predator comes calling in the dark, the wobble of the grass stalk alerts the chameleon of danger, at which point it just drops off into the underbrush.

So far, scientists have observed just two individuals: One male and one female, each of which was captured on an expedition to the Sorata massif mountains. The fact that only two individuals have been found makes it difficult to generalize upon the findings. It's possible that other chameleons in this species would be larger, or smaller, just like humans can be different heights. Indeed, scientists already know that chameleons in this family tend to have larger females and smaller males, which is called sexual dimorphism. The tiny chameleon's future is murky. The mountain forest where the lizards are found is already severely degraded. Poverty and growing populations have led to clearing of rainforests to make room for agriculture and livestock; deforestation affects around 94 percent of Madagascar's previously forested lands. The good news is that the Sorata massif has recently been included in a new protected area in Madagascar.

• Question No. 18

The author says that the tiny chameleon's future is murky because the mountain forest where the lizards are found is already severely degraded? How did the forest become degraded?

- (i) Poverty among the people of the region forced them to clear the rainforest to make room for agriculture and livestock.
- (ii) Tourism thrived in the area because of the presence of the rich biodiversity, which led to degradation of the forest.
- (iii) Repeated entry of researchers in the area created disturbance to the ecosystem, thus degrading the forests.

Options :

- 1. Only i
- 2. Both ii and iii
- 3. Both i and iii
- 4. Only ii
- 5. All of these

Answer : Only i

Direction:
